Triage b can be broken down into three phases: prehospital triage, triage b at the scene of the event, and triage b upon arrival to the emergency department. There are various triage b systems implemented around the world, but the universal goal of triage b is to supply effective and prioritized care to patients while optimizing resource usage and timing. The national guideline for the field triage of injured patients recommends the use of the universal triage system. Upon arrival to the emergency department, there are various triage systems implemented around the world, but the universal goal of triage is to supply effective and prioritized care to patients while optimizing resource usage and timing.

Additional resources: Printable handout. Medical control authorities have adopted a new mass casualty triage system that provides nationwide triage standardization and improved accuracy. As first responders sort and categorize victims by injury severity, the world health organization defines mass casualty incidents as disasters and major incidents characterized by quantity, severity, and diversity of patients that can rapidly overwhelm the ability of local medical resources to deliver comprehensive and definitive medical care.

2009 CDC published guidelines on the field triage process. The guidelines provided background material on six trauma systems, EMS systems, and providers and the field triage process. In addition, it incorporated the 2005-2006 deliberations and recommendations of the national expert panel on field triage. This work details the process of developing the updated field triage guideline, the supporting evidence, and the final version of the 2021 national guideline for the field triage of injured patients. How national field triage changes may affect you.

Dr. Mhayamaguru believes the new nationwide guidelines allow trauma professionals to see the bigger picture of how EMS professionals make decisions at the scene of an injury. He says trauma professionals will note the following in the 2021 guidelines:

- Aligned national guideline for the field triage of injured patients
- Patients meeting any of the above red criteria should be transported to the highest level trauma center available within the geographic constraints of the regional trauma system.
- Patients meeting any of the yellow criteria who do not meet red criteria should go to:

Methods study design:

We conducted an evidence-based revision of the field triage guideline using an interdisciplinary national expert panel and systematic reviews of the field triage literature. We used the reporting tool for practice guidelines in health care to report the 2021 revision to the field triage guideline. There has been limited rigorous scientific review of various forms of mass casualty incident triage used around the world. New methods of triage using new algorithms have been proposed but not tested in the field. At present, start remains the most commonly used mass casualty triage algorithm in the US.
