developmentalists often break the lifespan into nine stages: prenatal development, infancy and toddlerhood, early childhood, middle childhood, adolescence, emerging adulthood, early adulthood, middle adulthood, and late adulthood. Reviewed by Keonya Booker, Associate Professor at the College of Charleston on 9/15/21. This textbook analyzes the human lifespan from birth until death, with each chapter including a discussion about the physical, cognitive, and psychosocial changes that can be expected at every developmental stage. Lifespan development involves the exploration of biological, cognitive, and psychosocial changes and constancies that occur throughout the entire course of life. It has been presented as a theoretical perspective proposing several fundamental theoretical and methodological principles about the nature of human development. A life span developmental theory should address the following general challenges and questions: A criteria of adaptive development should be assessed in ways that facilitate interindividual comparison, prevent distortion by subjective biases, and build on cross-cultural consensus about what constitutes a successful life. B. Investigate how Wordsworth, 1802, in this poem, William Wordsworth writes: the child is father of the man. What does this mean?
