A metal lathe is an example of a machine tool. A machine tool is a machine for handling or machining metal or other rigid materials usually by cutting, boring, grinding, shearing, or other forms of deformations. Machine tools employ some sort of tool that does the cutting or shaping. All machine tools have some means of more standard tools including hard to find items and hard to find sizes. More innovative new tool designs to enhance the effectiveness of the new generation of CNC machine tools. More tool styles including our newest line of basic measuring tools sourced from other U.S. and global manufacturers.
